

Sanitation Accessories

National Construction Rentals provides a variety of accessories and services to improve the overall performance of our full line of sanitation products. From helping to preserve our environment and increasing the capacities of our existing equipment, to delivering world-class service to our clients, each provides a vital solution when the need arises.

Hand Sanitizer

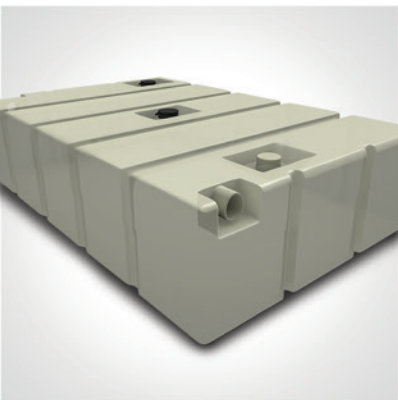

Self-contained hand sanitizers are a great option when water is not the desired choice or readily available. Hand sanitizers can be installed in portable toilets or used as a replacement for hand wash stations utilizing soap and water. National's hand sanitizing solution **kills 99.9 percent of bacteria** and is a safe alternative to soap and water for hand hygiene.

Containment Pan

Containment Pans are placed at the base of a portable toilet and used to catch wastewater spills. Each pan is specifically designed to extend slightly beyond a portable toilet's base, minimizing the capture of rain water while maximizing its purpose of collecting runoff.

Containment Pans are not a necessity, and are usually requested when mandated by a city's jurisdictional code.

Holding Tank

Holding Tanks are most often rented for fresh and wastewater applications. Construction sites typically use holding tanks to capture wastewater runoff. Easily placed beneath a job site or work trailer, the generous **250-gallon tank** provides an ideal and convenient wastewater receptacle.

Holding Tanks are commonly used for gray or black water runoff for job site trailers, portable toilets and sinks.
